

Internal Visual Inspection of In-Situ Marine Hose Strings by Push-Rod Camera

**Allied Marine
LOGISTICS
LIMITED**

Allied Marine Logistics Limited offers "peace of mind" to the operators of offshore terminals handling crude oil and refined products, through a comprehensive range of independent specialist marine hose support services, including push-rod camera inspection.

OUR PUSH-ROD GENERAL VISUAL INSPECTION SERVICE WILL ENABLE YOU TO:

- ◆ Monitor the **INTERNAL** condition of floating, reel, chute and catenary hoses.
- ◆ Monitor the **INTERNAL** condition for signs of nipple corrosion, liner damage and carcass kinking.
- ◆ Identify damage/deterioration anomalies before failure.
- ◆ Reduce unexpected failure by periodically inspecting OCIMF marine hoses in-situ.
- ◆ Reduce periodic inspection cost compared to hose string breakdown for deck/onshore inspection.

INSPECT FOR:

- ◆ Liner damage
- ◆ Nipple corrosion
- ◆ Kinking
- ◆ Impact damage
- ◆ Early signs of deterioration

7 REASONS WHY...

- ◆ **Business Continuity:** Reduce unexpected failures/loss/maintenance.
- ◆ **Reduced H&S Risk:** Avoid unnecessary hose string breakdown.
- ◆ **Reduced Time:** Hose string inspection within hours.
- ◆ **Reduced Cost:** Cheaper than onshore recertification or disaster recovery.
- ◆ **Increase Scope of Inspection:** Include areas traditional inspection methods can't reach.
- ◆ **Technical knowledge:** Of all well known marine hose brands.
- ◆ **Records:** Condition monitoring with video & photographic records.
